

ROBBIE GEORGE

Senior Red Team Operator | AI Systems Architect | Protocol Reverse-Engineer

Muskegon, Michigan • [Redacted phone] • [Redacted email] • linkedin.com/in/robbie-george • [github.com/\[your-handle\]](https://github.com/[your-handle])

CYBERSECURITY & ADVERSARY EMULATION

- 18+ years reverse-engineering proprietary protocols (CAN bus, OEM diagnostics, BCMs)
- Expert-level intermittent & cascading fault exploitation in live, safety-critical systems
- Systematic blind-spot discovery in partially observable environments
- Translated real-world attack surface discovery into formal, mathematically verified AI reasoning engines
- Deep packet inspection, man-in-the-middle, fault injection, side-channel timing analysis
- Custom tool development for protocol fuzzing and state-space exhaustion

CORE TECHNICAL SKILLS

Offensive Security: Reverse engineering • Protocol analysis • Fault injection • Custom tooling

Programming: Python (expert) • Bash • PowerShell • C (reading/embedded)

Frameworks: FastAPI • SQLAlchemy • Pydantic • pytest • Metasploit (contributor level understanding)

AI/LLM Orchestration: Claude • GPT-4 • Custom 64-agent reasoning systems • Prompt injection R&D;

Distributed Systems: Microservices • WebSocket • Mesh networking • <100 ms cross-platform sync

Security: Cryptographic attestation • RBAC • Deny-by-default • Audit trails • Paraconsistent logic

Low-Level: CAN bus • I2C • SPI • Oscilloscope • Voltage-drop analysis • ECU flashing

PROFESSIONAL EXPERIENCE

Independent AI & Red Team Research

Lead Architect & Developer (2024 – Present)

Built GhostLink Protocol — a 240-component, formally verified AI reasoning framework that directly evolved from 18 years of elite diagnostic attack surface discovery.

- Designed and proved correct a 20-layer, 64-agent reasoning engine using category theory and lambda calculus
- Implemented paraconsistent logic so contradictions yield information instead of system explosion

- Created SCAR learning: failures → automatic information gain and attack surface expansion
- Built content-addressed storage with cryptographic integrity and two-party policy guard
- Production-ready, fully tested, Dockerized, and documented with mathematical proofs

L.A.W.S. Emergency Vehicles

Lead Complex Electrical Systems Technician ("The Machine") (2006 – 2024)

- Reverse-engineered undocumented CAN bus implementations across police, fire, and EMS fleets
- Consistently diagnosed and exploited intermittent faults in life-critical electrical systems
- Developed progressive-complexity attack methodology later formalized into GhostLink's reasoning core
- Designed and deployed custom Body Control Module integrations

KEY PROJECTS

GhostLink Protocol – Full-stack adversarial reasoning engine

Universal Automation Engine – Natural language → privileged action

Consciousness Detection Algorithm – Research into emergent properties

EDUCATION & CERTIFICATIONS

Autodidact – Advanced Systems Engineering, Mathematics, Computer Science

Field Certifications: OEM diagnostic systems • Emergency vehicle integration specialist • 18+ years
CAN bus reverse engineering

AVAILABILITY

Available for full-time or contract red team, AI security, or advanced systems exploitation roles.
